

Second topic:

ECO PLANETARY GOVERNMENT

There are currently 194 sovereign countries recognized by the UN with self-government and complete independence. While the 7.8 billion inhabitants in 2021 communicate through 7,000 different languages, with 90% spoken by less than 100,000 people, by tribes or populations with different dialects. It is clear that the United Nations organization is insufficient to create and consolidate planetary unity. For this, it is necessary to create a World Government together with a Global Parliament that guarantees democracy and citizens' rights.

PROJECT

The project 2% of GDP for the Planet is coordinated and administered worldwide by a Planetary Eco Government with responsibilities in ecological issues, controlled by a system of Global Direct Digital Democracy in which all citizens participate, integrating the World Parliament, in charge of promulgating the laws, appoint and remove the authorities of the universal executive. This Parliament is advised by a Council of Sciences made up of top-level scientists from all continents, responsible for exposing the critical aspects of each new law under treatment.

A Planetary Eco Government is required under a presidential form of executive power to solve global problems. With a renewable mandate every four years.

PROPOSAL:

- 1 World President
- 1 Planetary Parliament
- 1 Global Economy
- 1 System that replaces money
- 1 Planetary Army
- 1 Universal Magna Carta
- Without Borders
- 1 Total Consensus Integration
- 1 Universal language
- Abolition of Extreme Poverty
- Birth Control

Just as the provinces do not enjoy absolute sovereign power, within the new world organization, neither will the States have absolute sovereign power, since there will be a new supranational structure that they will become part of.

This transfer of rights will logically be resisted by the factors of power that benefit from the current status quo, but the evolution of history could never be stopped by the interests of minorities.

The integration of the World Parliament is directly with all citizens, using digital technology for this.

In principle, the planetary president will have responsibilities limited to global problems, such as hunger, global warming, drug trafficking, environmental catastrophes, etc., and will be in command of the Green Helmets Force.

The existence of world funds creates the need for an administrative superstructure and hence the move towards the Coalition Planetary Eco-Government.

Overpopulation, hunger, global warming, drug trafficking, corruption, environmental catastrophes, exceed the response capacity of individual nations. To resolve global crises, it is necessary to create new instruments of centralized government at the world level, which guarantee security, peace, progress and well-being to all the inhabitants of the globe.

In order for the objective external world circumstances to occur that allow the creation of the First Planetary Eco Government, a sufficiently general crisis must arise, the attention and solution of which demand the concentration of all human, economic and technical resources on the planet.

This previous picture of crisis is the one posed by the climatic anomaly, or Global Warming-Flood. But there is not enough current exogenous burden, because it is considered that the phenomenon does not represent an immediate danger but in the medium and long term, for the next decades.

Another is the reality, if the climatic anomaly were to accelerate. If it occurs, the reaction time and reorganization of all the planet's resources is no longer in terms of decades but of years. Reason enough to decide to activate a change of model on the government

systems of the entire planet. This can already happen from what happened with the melting of 97% of the surface of Greenland's glaciers in July 2012. This can be repeated on a greater scale and intensity if the North Pole is completely thawed.

MASTER PLAN TO SAVE THE PLANET

1) Creation of the Planetary Eco Government under the Direct Digital Democracy system advised by a Science Council made up of scientists.

2) The executive branch of the PEG will have a presidential character, with a mandate for 4 years and with the option of a second term for another 4 years.

3) Direct Digital Democracy works through the internet and all citizens from 16 years of age are entitled to vote the laws that order and regulate the entire planet, without the need for legislative representatives. It can also dismiss the current world authorities for failure to fulfill their functions.

4) The Council of Sciences has the function of advising the World Legislative Power, made up of all citizens qualified to vote, providing a scientific basis for their arguments. It is made up of a planetary network of top-level scientists.

5) The objective of the PEG is to ensure peace, progress and the habitability of the planet for all generations, therefore it is the highest world authority and national governments are obliged to submit to its laws.

6) The PEG has full powers to order intervention over any national jurisdiction that does not protect existing natural resources in its territory, which are vital for the rest of the planet's population.

7) The creation of a single Planetary Army will be provided, forming a coalition of member states that accept this initiative and in doing so dissolve their national armed forces in order to rationalize resources.

8) The Green Helmets force will be created to intervene in environmental conflicts.

9) English will be adopted as a universal second language and will be taught in all educational systems of the world.

10) The PEG will be financed with the contribution of 2% of the world GDP, for this it will apply a rate of 0.3% on the international and national financial system. If such rate is insufficient, a tax of 8% will be applied on the profits of the oil companies that operate in each country, and if this is not enough, an appeal will be made to collect up to 5% of the net profit of the multinationals. As an alternative, the subsidy of about 1/2 billion dollars to the oil, gas and coal companies will be removed, while the creation of the Planetary Army allows the saving of another billion.

11) By popular consultation, citizens will vote if they agree with the formation of a Planetary Eco Government, under a presidential form of executive power, renewable every four years, with limited responsibilities to solve global problems. Through an online vote 7.8 billion (2021) we will be able to decide the future of our planet and supervision can be exercised by the United Nations. Half plus one of all votes will enable the creation of the PEG.

12) The software giants - Google and Microsoft - will be hired to develop a system that enables online monitoring of every penny of the dollar, from when it is assigned or donated, to its final destination. Any user on the web will be able to do the follow-up.

OBJECTIVES:

With 2 or 3% of world GDP, annually, it will be possible to:

1. Abolish extreme poverty all over the Earth, forever.
2. No more children will die of hunger and preventable diseases.
3. Forests will be green, 30 billion trees will be planted per year.
4. Technology will be renewed to stop polluting.
5. The vehicle fleet will be replaced by another one with hydrogen and electricity.
6. Alternative energies will be developed to replace oil, gas and coal.
7. The oceans will be decontaminated.
8. Amazonia and the Arctic will be saved.
9. Overcrowding will be limited.
10. There will be items for environmental catastrophes.
11. Terrorism will be fought.
12. International drug trafficking will be fought.
13. Criminality and organized corruption will be dismantled.
14. Ecosystems will be preserved.

In addition, the United Nations Millennium Development Goals will be met:

1. Eradicate extreme poverty and hunger.
2. Achieve universal primary education.
3. Promote gender equality and empower women.
4. Reduce infant mortality.
5. Improve maternal health.
6. Combat HIV / AIDS, malaria and other diseases.
7. Guarantee the sustainability of the environment.
8. Foster a global partnership for development.

What does it take for this Positive Global Change?

The Master Plan must be exposed and debated at the United Nations. Then call a world plebiscite to approve by a simple majority the creation of the Coalition EGP and the Global Direct Digital Democracy system. In this way, we will all guarantee our participation in the improvement of a new world of freedoms and responsibilities at the service of planetary citizens.

FUNDS APPLICATION OF 2% OF GDP

1. 500 billion U\$S / year to eradicate hunger, diseases and alleviate extreme poverty.

2. 30 billion U\$S / year to plant 30 billion trees / year (kiri) and capture CO₂ in the trunks and regulate the climate.

3. 250 billion U\$S (single item) to urgently accelerate the development of fusion reactors and replace the energy matrix based today on hydrocarbons and coal.

4. 100 billion U\$S / year to decontaminate the oceans and recover the fishing grounds, save the Amazon and the Arctic.

5. 3 billion U\$S / year to develop technology for the deflection of asteroids that can impact the Earth. This is necessary to do to prevent this constant risk.

7. One trillion U\$S / year to finance the Planetary Army that will replace the national ones.

8. 250 billion U\$S (single item) for environmental catastrophes.

9. 300 billion U\$S / year for the development of alternative energies.

SECONDARY OBJECTIVES

- Creation of the NGO Commission for Cooperation and Universal Volunteering of the Solidarity Fund.

- Call for presentation of NGO programs to eradicate hunger, disease and poverty on the planet, financed by the Solidarity Fund.

- Use of the greatest technological and human resources to end hunger, overpopulation and Global Warming.

- Projects of political and humanitarian forms to generate the desired Positive Global Change.

- Study of strategies to achieve the support of the majority of the population and entities for the Solidarity Fund.

QUESTIONS:

1- Do you consider that individual country-by-country actions will be effective in curbing Global Warming or is supranational coordination required?

2- Should the funds of 2/3% of world GDP be administered by a Planetary Eco Government?

3- Do you consider that Global Direct Digital Democracy, supported by modern technologies, is the most appropriate way to exercise control over the executive power of the Planetary Eco-Government?

4- Do you think that an International Council of Sciences in support of the Global Parliament is useful and necessary, so that citizens have truthful information to be able to decide their votes?

5- Do you share the criterion that the Planetary Eco Government is empowered to intervene in all countries and / or governments that do not protect basic and universal biodiversity?

6- Do you agree with the formation of the Green Helmets force, to assist the Planetary Eco Government in its mission to protect the global environment?

7- Do you agree with the United Nations having a world plebiscite, with the participation of all citizens, to decide on the creation of the Planetary Eco Government?

8- Do you support the initiative to eradicate hunger and abolish extreme poverty throughout the Earth, applying 500 billion dollars per year?

9- What do you suggest about the application of funds of 2/3% of world GDP per year, how to make spending more efficient for humanity?

10- Do you think that NGOs should participate in the new world organization? as?
