

Third topic:

## **DIRECT DIGITAL DEMOCRACY**

Today digital technology allows us to move towards modern forms of Direct Digital Democracy with an Advisory Council made up of a Committee of Scientists. Electronic voting can be channeled through loyal e-mails from the identity document numbers, protected with three inviolable verification codes.

Thanks to the advancement in modern digital technologies, it is possible to advance towards forms of Direct Democracy. This will end the era of political parties and corruption within the power system.

E-mails can evolve to support electronic voting and the new modality can be financed if the mail accounts are paid, in principle, from one dollar per month.

Emails must be loyal to the document number of each person. This will generate a cost and therefore the price of one dollar per month, which may be temporary. The giant Google may be the one to carry out the pilot test in the United States, the ideal country to experimentally develop Direct Digital Democracy.

Legislators or representatives of the people will no longer exist. He will be the one who will directly vote the laws, the members of the executive, police, military and judicial powers, and will be previously advised by a Council of Sciences. Irresponsible or corrupt officials may also be removed from their functions by direct vote.

Absolute power will reside in the World Parliament, made up of all the people, who will have access to electronic voting, through the internet.

By law, audiovisual media will modify their contents, dedicating 80% of them to science and art training for users and the other 20% will be dedicated to entertainment. In the emerging knowledge society, time will have a concept of fundamental value and will be educated not to waste it on banalities. Mediocrity will be seen as the worst possible disease.

The change will be so drastic that the new mentality and the new freedoms will observe the previous era as a period of darkness and slavery.

## **QUESTIONS:**

1- Do we have the technological support to adopt a system of Global Direct Digital Democracy, with the participation of all the citizens of the planet from 16 years of age?

2- Do you consider that putting global Direct Digital Democracy into practice is the correct way to strengthen individual freedoms and limit the power of governments and multinationals?

3- Do you trust the people's potential to govern themselves, through a complementary program of sustained education at all levels?

4- Does Direct Digital Democracy, operating under the advice of an International Council of Sciences, made up of the best scientists from all continents, represents an advance on the conventional representative democracy model?
